

Signaloid C0-microSD QuickStart Guide

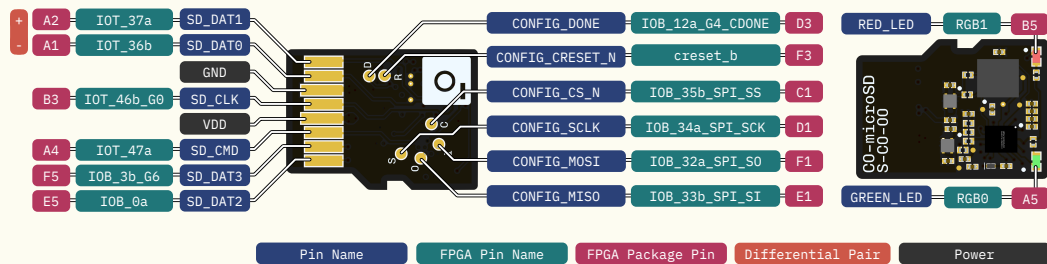

Package includes:

- 1x Signaloid C0-microSD
- 1x Signaloid C0-microSD pinout sticker

Pinout diagram:

1 Verify that your host machine can correctly access the C0-microSD

macOS:

```
% diskutil list
```

```
/dev/disk4 (internal, physical):
#:                               TYPE NAME          SIZE          IDENTIFIER
0:                               *20.2 MB      disk4
```

Linux:

```
% lsblk
```

```
NAME MAJ:MIN RM  SIZE RO TYPE MOUNTPOINTS
sdb   8:16   1  19.3M  0 disk
```

2 Check which mode the C0-microSD is in (default is “bootloader mode”)

Bootloader mode. Red LED is lit.

SoC mode. Green LED is lit.

3 Run an example.

In bootloader mode, you can load custom FPGA bitstreams to the C0-microSD. See link for hardware RTL examples.

In SoC mode, you can load programs to the Signaloid RISC-V SoC and interact with these programs over the SD interface. See links for examples.
